

Foreword

This book contains the results of traffic counts and analysis conducted by the Traffic Engineering and Road Safety Section of the Nova Scotia Department of Public Works since 2013. All traffic count information from 2013 to 2022 is included for all roads other than the 100 Series Highways, Trunks, and Routes. These counts are done by request (not part of our regular count program) and may include municipal and private roads.

Traffic count data done before 2013 is available upon request.

Note: Traffic Data (ADT, AADT, and %TRK) for 2020 may have been affected by the pandemic (COVID).

Please direct any comments or inquires concerning this publication to:

This publication is available on the Nova Scotia Department of Public Works website.
Digital copies (PDF) are available upon request.

Introduction

An explanation of abbreviated terms used in this book.

Types of counts:

TC - Traffic Count. This type of count is volume only conducted with a portable traffic counter connected to a single road tube that counts each vehicle's axles and divides by two. These counts are one week in duration.

VC - Vehicle Classification. This type of count is conducted with a portable traffic counter connected to road tubes (two parallel), both counting vehicles and classifying them. These counts are one week in duration.

Other Abbreviations:

ADT - Average Daily Traffic. The average number of vehicles passing the count location in a 24 hour period based on a temporary count.

AADT - Annual Average Daily Traffic. The average number of vehicles passing the count location in a 24 hour period, averaged on the basis of one year. AADT's are determined by estimation from a temporary count using seasonal and group expansion factors.

GRP - Group .The ADT at a particular location will vary due to seasonal and other influences. Count locations are "grouped" according to their seasonal variation patterns. Appropriate factors for estimating the AADT from a short count vary between groups. Group "AA" counts have the least seasonal variation while Group "H" have the greatest.

85 % - This is the **speed** at which 85% of the vehicles are traveling at, or below. The 85% of vehicle speeds are based on all vehicles and may not represent free flow conditions.

% TRK - Truck percentage of AADT.

Inter/s - Intersection.

Inter/c - Interchange.
