Trunk Mobile Radio System (TMRS) Broadband for Rural Nova Scotia Initiative *Lansdowne Station, Pictou County*

The Province of Nova Scotia is currently working to improve the quality of its Trunked Mobile Radio System (TMRS), which is a telecommunications system built to support all day-to-day field communications for provincial government departments, their agencies, the RCMP, and several federal government departments and agencies. In addition, the Province is also working to ensure that high-speed access to the Internet is available to all Nova Scotians.

To achieve both these objectives, the Nova Scotia Provincial Government plans to erect new structures at sites at the following locations. The structure will be used for the TMRS and the Broadband for Rural Nova Scotia initiative:

Matheson Rd., Lansdowne Station, Pictou County. Nova Scotia Provincial Government is proposing to construct a 51m guyed tower complete with a 12' X 24' equipment shelter. The tower will be equipped with a locked anti-climb attachment. The proposed tower site is located off Matheson Rd., Lansdowne Station. Latitude 45°24'58.2" Longitude 62°48'44.6"

All questions or comments should be directed to the contact below and must be received no later than June 22, 2009, as per Industry Canada regulations and Municipal guidelines.
