Week 4 (January 22 to January 28, 2012)

### Summary of Nova Scotia surveillance findings, for the period ending January 28, 2012:

- There was no influenza activity reported for week 4.
- Other respiratory pathogen activity continues. Positive results were received for coronavirus, mycoplasma pneumonia, parainfluenza, and RSV.

Week 4 (January 22 to January 28, 2012)

### APPENDIX: Definitions used in Influenza Surveillance, 2011-2012

1) ILI in the general population:

Acute onset of respiratory illness with fever and cough and with one or more of the following - sore throat, arthralgia, myalgia, or prostration which is likely due to influenza. In children under 5, gastrointestinal symptoms may also be present. In patients under 5 or 65 and older, fever may not be prominent.

2) Outbreaks of influenza / ILI by setting:

### Schools and Daycares:

Greater than 10% absenteeism (or absenteeism that is higher (e.g. >5-10%) than expected level as determined by school or public health authority) which is likely due to ILI. Note: it is recommended that ILI school outbreaks be laboratory confirmed at the beginning of influenza season as it may be the first indication of community transmission in an area.

#### Residential institutions:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case. Institutional outbreaks should be reported within 24 hours of identification. Residential institutions include but not limited to long-term care facilities (LTCF) and prisons.

#### Other Settings:

Two or more cases of ILI within a seven-day period, including at least one laboratory confirmed case; i.e. workplace, closed communities.

3) National FluWatch Definitions for Influenza Activity Levels:

### Influenza activity levels are defined as:

**1 = No activity:** i.e. no laboratory-confirmed influenza detections in the reporting week, however,

sporadically occurring ILI\* may be reported

2 = Sporadic: sporadically occurring ILI\* and lab confirmed influenza detection(s) with NO ILI/influenza

outbreaks detected within the influenza surveillance region†

**3 = Localized:** evidence of increased ILI\* and lab confirmed influenza detection(s) together with outbreaks

in schools, hospitals, residential institutions and/or other types of facilities occurring in less

than 50% of the influenza surveillance region(s) †

**4 = Widespread:** evidence of increased ILI\* and lab confirmed influenza detection(s) together with outbreaks

in schools, hospitals, residential institutions and/or other types of facilities occurring in

greater than or equal to 50% of the influenza surveillance region(s)+

<sup>\*</sup> ILI data may be reported through sentinel physicians, emergency room visits or health line telephone calls.

<sup>†</sup> Sub-regions within the province or territory as defined by the provincial/territorial epidemiologist.

- 4) District Health Authorities (DHAs), Nova Scotia:
  - DHA 1 South Shore Health
  - DHA 2 South West Health
  - DHA 3 Annapolis Valley Health
  - DHA 4 Colchester East Hants Health Authority
  - DHA 5 Cumberland Health Authority
  - DHA 6 Pictou County Health Authority
  - DHA 7 Guysborough Antigonish Strait Health Authority
  - DHA 8 Cape Breton District Health Authority
  - DHA 9 Capital Health
