

Steps You Can Take To Check the Version of Your SAP Desktop Software

Step 1 - Click on your SAP logon icon or shortcut to start the SAP Graphical User Interface (GUI) program.

Step 2 - Once the logon window is open, note the SAP GUI release numbers in the Blue information bar at the top left corner.

Step 3 – If it does not say **SAP Logon 710** then you require an upgrade to your desktop software. Contact your IT Department to have your desktop updated.
