

Presents the 2005

Angus Hamilton Lecture and Christmas Social

Art Gallery of Nova Scotia

December 8, 2005

2:30 pm — 6:00 pm

Guest Lecturer

Melissa Edwards

“Geist Maps of Canada”

The Angus Hamilton Lecture Series, initiated in 1994, promotes the use of Geomatics and Geographic Information Systems (GIS) in the Maritimes. The lecture series **honours the extensive contribution to land information management in the region** by Angus Hamilton, UNB Professor Emeritus (Geodesy and Geomatics). This year's lecture is supported by the Council of Atlantic Premiers - Geomatics Atlantic Trust Fund, the Geomatics Association of Nova Scotia and the New Brunswick Branch - Canadian Institute of Geomatics.

Melissa Edwards is a freelance writer and an associate editor at *Geist*, a literary magazine published in Vancouver, British Columbia. She is the current producer of the magazine's regular "Caught Mapping" series of Canadian views, which has been featured in exhibitions in Toronto, Regina and Vancouver. She will present the sometimes controversial and occasionally errant Geist Maps of Canada. See a few highlights from the Caught Mapping series and hear how Ms. Edwards and the Geist mapping team conceive of and create these literary landscapes.

Come join us for our annual Christmas Social and network with others in the Nova Scotia geomatics industry. Hors d'oeuvres and cash bar following the lecture.

The Angus Hamilton Lecture and GANS Social are open to all (members and non-members). Guests are welcome.
