Introduction

AMEC Earth & Environmental, a division of AMEC Americas Limited (AMEC), is pleased to provide Melford International Terminal Inc. the findings of a marine sediment sampling program (MSSP) undertaken at Melford, Guysborough County, Nova Scotia (NS). The purpose of this program was to characterize the sediment to determine acceptable disposal options for the marine sediment intended to be dredged.

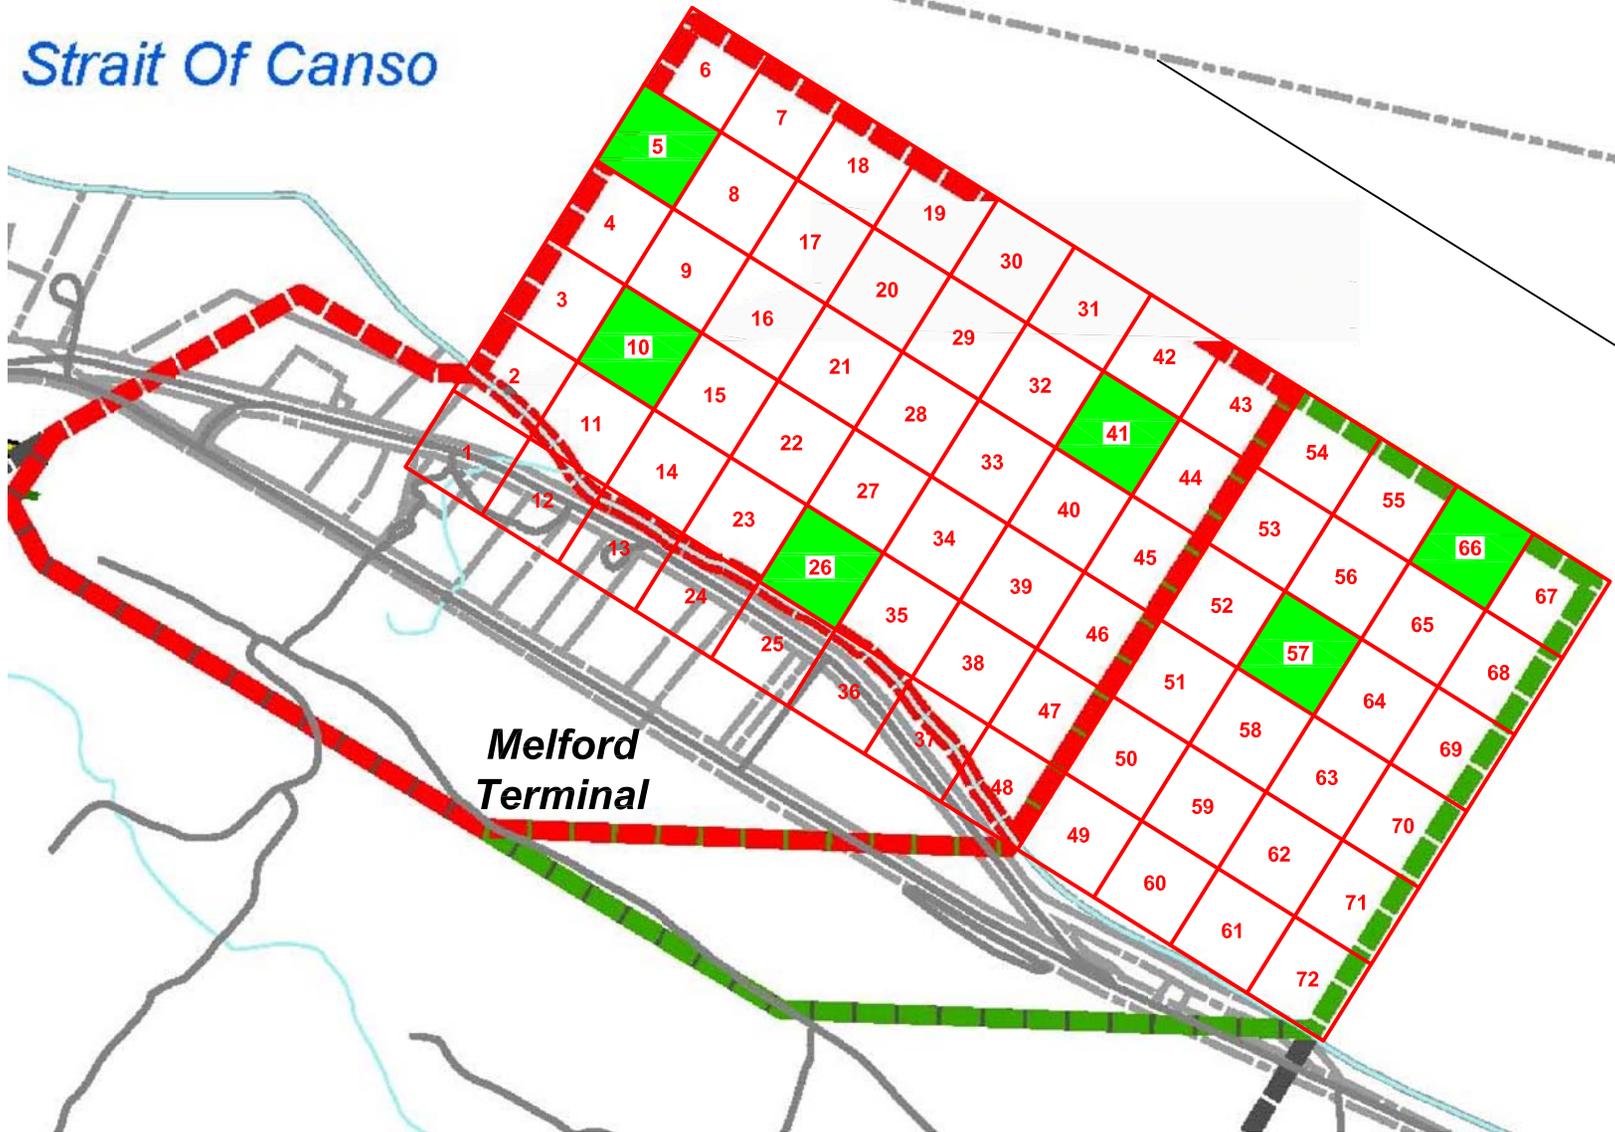

Scope and Methodology

The sediment samples were collected on July 25, 2007 at Melford, Guysborough County, NS. A total of six marine sediment samples were collected within the footprint of the proposed project area at randomly selected sampling locations provided by AMEC. This scope and methodology was based on preliminary data collection purposes only and may or may not satisfy the scope of the actual project at this time.

The selection of sample stations followed guidance provided in the Environmental Protection Series: *Users Guide to the Application Form for Ocean Disposal* (Report EPS 1/MA/1 December 1995), where a random approach was implemented for the location of sampling stations within the proposed dredging area. The unstratified area was divided into square blocks where at least five times as many blocks as the number of stations required were used. In this case 72 blocks were used to delineate the footprint. A random number generator software program was then used to derive the six sampling locations within the footprint. A figure indicating those sample locations was generated and provided to the divers for implementation.

A Garmin eTrex Legend® Global Positioning System (GPS) was used to georeference the sampling locations. The coordinates were recorded by the GPS unit and are listed in Table 1 as latitude and longitude (ddmmss.s) (Datum: NAD 83).

Table 1 *Marine Sediment Sampling Program Coordinates at Melford, Guysborough County, NS*

Sample Station ID	Latitude	Longitude
Melford 5	N 45° 32.111	w 61° 17.734
Melford 10	N 45° 32.064	W 61° 17.712
Melford 26	N 45° 31.908	W 61° 17.532
Melford 41	N 45° 31.941	W 61° 17.275
Melford 57	N 45° 31.817	W 61° 17.054
Melford 66	N 45° 31.865	W 61° 16.922

The sample collection, preparation, and analyses were conducted in accordance with Environment Canada's publication *Guidance Document on Collection and Preparation of Sediments for Physicochemical Characterization and Biological Testing, December 1994*. Connors Diving Services Ltd was retained to collect the sediment samples. Diving services were conducted in accordance with the Canadian Standards Association (CSA) Standard Z-275.2/92 *Occupational Safety Code for Diving Operations* and guidelines defined by provincial Occupational Health and Safety Standards.

The samples were collected by the divers using laboratory-provided sample bottles to penetrate the substrate, as much as was practical, such that the upper 5cm of the sediment column was collected. As per laboratory protocol, two 500 ml jars of sediment were collected per station. Following sample collection, the samples were placed in a cooler with ice and hand delivered to Maxxam Analytics Inc. (Maxxam), an accredited laboratory with the Canadian Standards Association, in Bedford, NS for select chemical analyses.

The sediment samples were analyzed for metals including tin, mercury, hexavalent chromium, and low level selenium; polycyclic aromatic hydrocarbons (PAHs); polychlorinated biphenyls (PCBs); benzene, toluene, ethylbenzene, and xylene (BTEX); total petroleum hydrocarbons (TPHs); total inorganic carbon (TIC) and total organic carbon (TOC); total dichloro-diphenyl-trichloroethane (DDT); and grain size.

The marine sediment sample results (six in total) were compared to both CEPA Ocean Disposal Guidelines for the Atlantic Region and CCME Marine Sediment Probable Effects Levels (PELs) as well as the CCME *Soil Quality Guidelines* (SQGs) for the Protection of Environment and Human Health in agricultural, residential/parkland, and commercial/industrial applications and the Atlantic RBCA Version 2.0 *Tier 1 Risk-Based Screening Levels* (RBSLs).

Marine Sediment Sampling Analytical Results

The analytical results of the six marine sediment samples obtained at Melford are summarized in Tables 2 to 4, and discussed below. For the metals results, only those parameters for which there are established regulatory guidelines are included in the table. The complete set of analytical results, including laboratory QA/QC and Certificates of Analyses for all parameters tested, are provided in Attachment A.

Table 2 Analytical Results of the Sediment Samples Collected at Melford, Guysborough County, NS

² denotes guideline value based on "10⁶ Incremental Risk".

- **PAH Concentrations**

The CCME SQGs for PAHs in agricultural, residential/parkland, and commercial/industrial applications do not provide a total PAH limit but stipulate guideline values for individual PAH compounds. Total PAH levels are regulated at a value of less than or equal to 2.5 mg/kg under CEPA in order to meet ocean disposal criteria. The CCME PELs for the protection of marine aquatic life do not provide a total PAH limit, but stipulate guideline values for individual PAH compounds. The analytical results of the samples collected showed no exceedances of any reported guidelines.

PAH RESULTS

- 6 samples collected.
- No reported guideline exceedances

- **PCB Concentrations**

The CCME SQGs for PCBs in agricultural, residential/parkland, and industrial/commercial applications are 0.5, 1.3, and 33.0 mg/kg, respectively. PCBs were detected in 3 of the collected samples, however, there were no exceedances of the above-mentioned guidelines (Table 2). Total PCB values are regulated at a value of less than or equal to 0.1 mg/kg under CEPA in order to meet ocean disposal criteria. The CCME PEL for PCB is regulated at a value of less than or equal to 0.189 mg/kg. Three samples (Melford 41, Melford 57, and Melford 66) exceeded the CEPA guideline and one sample (Melford 66) exceeded the CCME PELs.

PCB RESULTS

- 6 samples collected
- No exceedances of the CCME SQGs for any application.
- 3 samples exceedances for CEPA guidelines.
- 1 sample exceedance for CCME PELs.

- **Dichloro-Diphenyl-Trichloroethane (DDT) Concentrations**

The CCME SQGs for total DDT in agricultural, residential/parkland, and commercial/industrial applications are 0.7 mg/kg, 0.7 mg/kg, and 12 mg/kg, respectively. DDT was not detected in any of the samples collected at Melford, hence there were no exceedances of the above-mentioned guidelines (Table 2).

DDT RESULTS

- 6 samples collected.
- No reported guideline exceedances of CCME SQGs for agricultural, residential/parkland or commercial/industrial applications.

- **Metal Concentrations**

Samples collected from the proposed dredging site were tested for metals and the analytical results were compared to the CCME SQGs for agricultural, residential/parkland, and commercial/industrial applications for individual metals. The regulated values for metals under the CEPA guidelines for ocean disposal of dredged sediments include

METAL RESULTS

- 6 samples collected.
- No samples reported exceedances of the CCME SQGs for any application.
- No sample exceedances of CEPA guidelines or former EC Interim Rejection Limit guidelines.

cadmium at 0.6 mg/kg and mercury at 0.75 mg/kg.

The former Environment Canada (EC) Interim

Rejection Limits for copper, lead, and zinc are 81 mg/kg, 66 mg/kg, and 160 mg/kg, respectively. No samples collected showed exceedances of any reported guideline (Table 3).

- **Petroleum Hydrocarbons**

BTEX was not detected in any of the samples but TPHs were detected in all six of the samples. These levels were not in exceedance of the referenced CCME SQGs and Atlantic RBCA Tier 1 RBSLs (Table 4).

BTEX/TPH RESULTS

- 6 samples collected.
- No reported guideline exceedances of CCME SQGs and Atlantic RBCA Tier 1 RBSLs.

- **Sediment Grain Size**

The laboratory-determined grain size distribution of the sediment samples collected at the proposed dredging area showed samples Melford 5, 10 and 26 to be predominantly gravel (38-62%) and sand (29.0-45.0%) with lesser amounts of silt (4.8-14.0%), and clay (3.3-10.0%). Samples Melford 41 and 66 were predominantly silt (29.0-32.0%) and clay (25.0%) with lesser amounts of gravel (24%) and sand (20-21%). Sample Melford 57 was predominantly sand (36.0%) and silt (29%) with lesser amounts of clay (22%) and gravel (12%) (Table 2).

Quality Assurance/Quality Control

Samples were hand delivered to the laboratory by Connors Diving Services Ltd after being relinquished by AMEC employees following program completion. All samples collected were tagged on site and marked with a waterproof marker with the date, sample site identifier, and sample number. The samples were placed upright on ice inside a cooler for safe storage and transport. Duplicate samples were collected to safeguard against loss or damage during transport, and were stored and refrigerated until the analytical results were received.

As per AMEC's internal review policy, a project reviewer (Mr. Bruce Moore, B.Sc.) was established for review of this project. This individual reviewed this report prior to its release. The limitations of this document are provided in Attachment B.

Summary

The analytical results of the six samples indicate that three samples (Melford 41, 57, and 66) of the sediment do not meet the criteria for CEPA Ocean Disposal Guidelines for the Atlantic Region for PCB's and one sample (Melford 99) exceeds the criteria for CCME PELs.

- PCB's: Exceedances of the CEPA Ocean Disposal Guidelines (Atlantic Region) for samples Melford 41, 57, and 66 and CCME PELs for sample Melford 66.

Water Quality Summary

To aid in the establishment of background water quality of the construction area of the Melford project area a water quality sampling program was carried out on July 25, 2007 (Figure 2).

A YSI 600 Multi-Probe Data Logger was used to measure physical and chemical water quality data at the six sampling sites for sediment samples. GPS coordinates were taken at each of the sampling sites as well as temperature, salinity, dissolved oxygen (DO), and pH. These parameters were taken and recorded at 1 m increments from the surface of the water to the ocean floor.

The following points summarize the ranges of the parameters that were tested:

- Temperature values ranged from 19.02 – 21.07 °C at the surface to 3.54 – 9.70 °C at the ocean floor.
- Salinity values ranged from 26.81 – 27.77 ppt at the surface to 29.29 – 30.21 pptL at the ocean floor.
- DO (%) values ranged from 48.2 – 61.4 % at the surface to 38.2 – 45.7 % at the ocean floor.
- DO (mg/L) values ranged from 3.73 – 4.83 mg/L at the surface to 4.08 – 4.37 mg/L at the ocean floor.
- pH values ranged from 8.15 – 8.22 at the surface to 8.13 – 8.30 at the ocean floor.
- Conductivity values ranged from 41.82 – 43.82 at the surface to 45.40 – 47.69 at the ocean floor.

Table 5 Water Quality Parameters Collected at Melford, Guysborough County, NS

ATTACHMENT B
Limitations

LIMITATIONS

1. The work performed in this report was carried out in accordance with the Standard Terms of Conditions made part of our contract. The conclusions presented herein are based solely upon the scope of services and time and budgetary limitations described our contract.
2. The report has been prepared in accordance with generally accepted environmental study practices. No other warranties, either expressed or implied, are made as to the professional services provided under the terms of our contract and included in this report.
3. The objective of this report was to collect samples from the proposed Project area, given the context of the terms of reference provided by Melford Marine Terminal Inc., and compare the analytical results of the samples with applicable environmental regulations within the Project jurisdiction.
4. The conclusions of this report are based in part, on the information provided by others. The possibility remains that unexpected environmental conditions may be encountered at the site in locations not specifically investigated. Should such an event occur, AMEC Earth & Environmental, a division of AMEC Americas Limited must be notified in order that we may determine if modifications to our conclusions are necessary.
5. Any use which a third party makes of this report, or any reliance on or decisions to be made based on it are the responsibility of such third parties. AMEC Earth & Environmental, a division of AMEC Americas Limited accepts no responsibility for damages, if any, suffered by any third party as a result of decisions made or actions taken based on this report.
