TURNING NOVA SCOTIA INTO A CLEAN ENERGY POWERHOUSE

POWERING A GREEN NOVA SCOTIA, TOGETHER.

WHAT ARE WE DOING?

A new and strengthened electricity transmission line with our neighbours in New Brunswick and Quebec would support the reliable supply of power for Nova Scotians, as well as the further development of clean energy in Nova Scotia, such as hydrogen and wind.

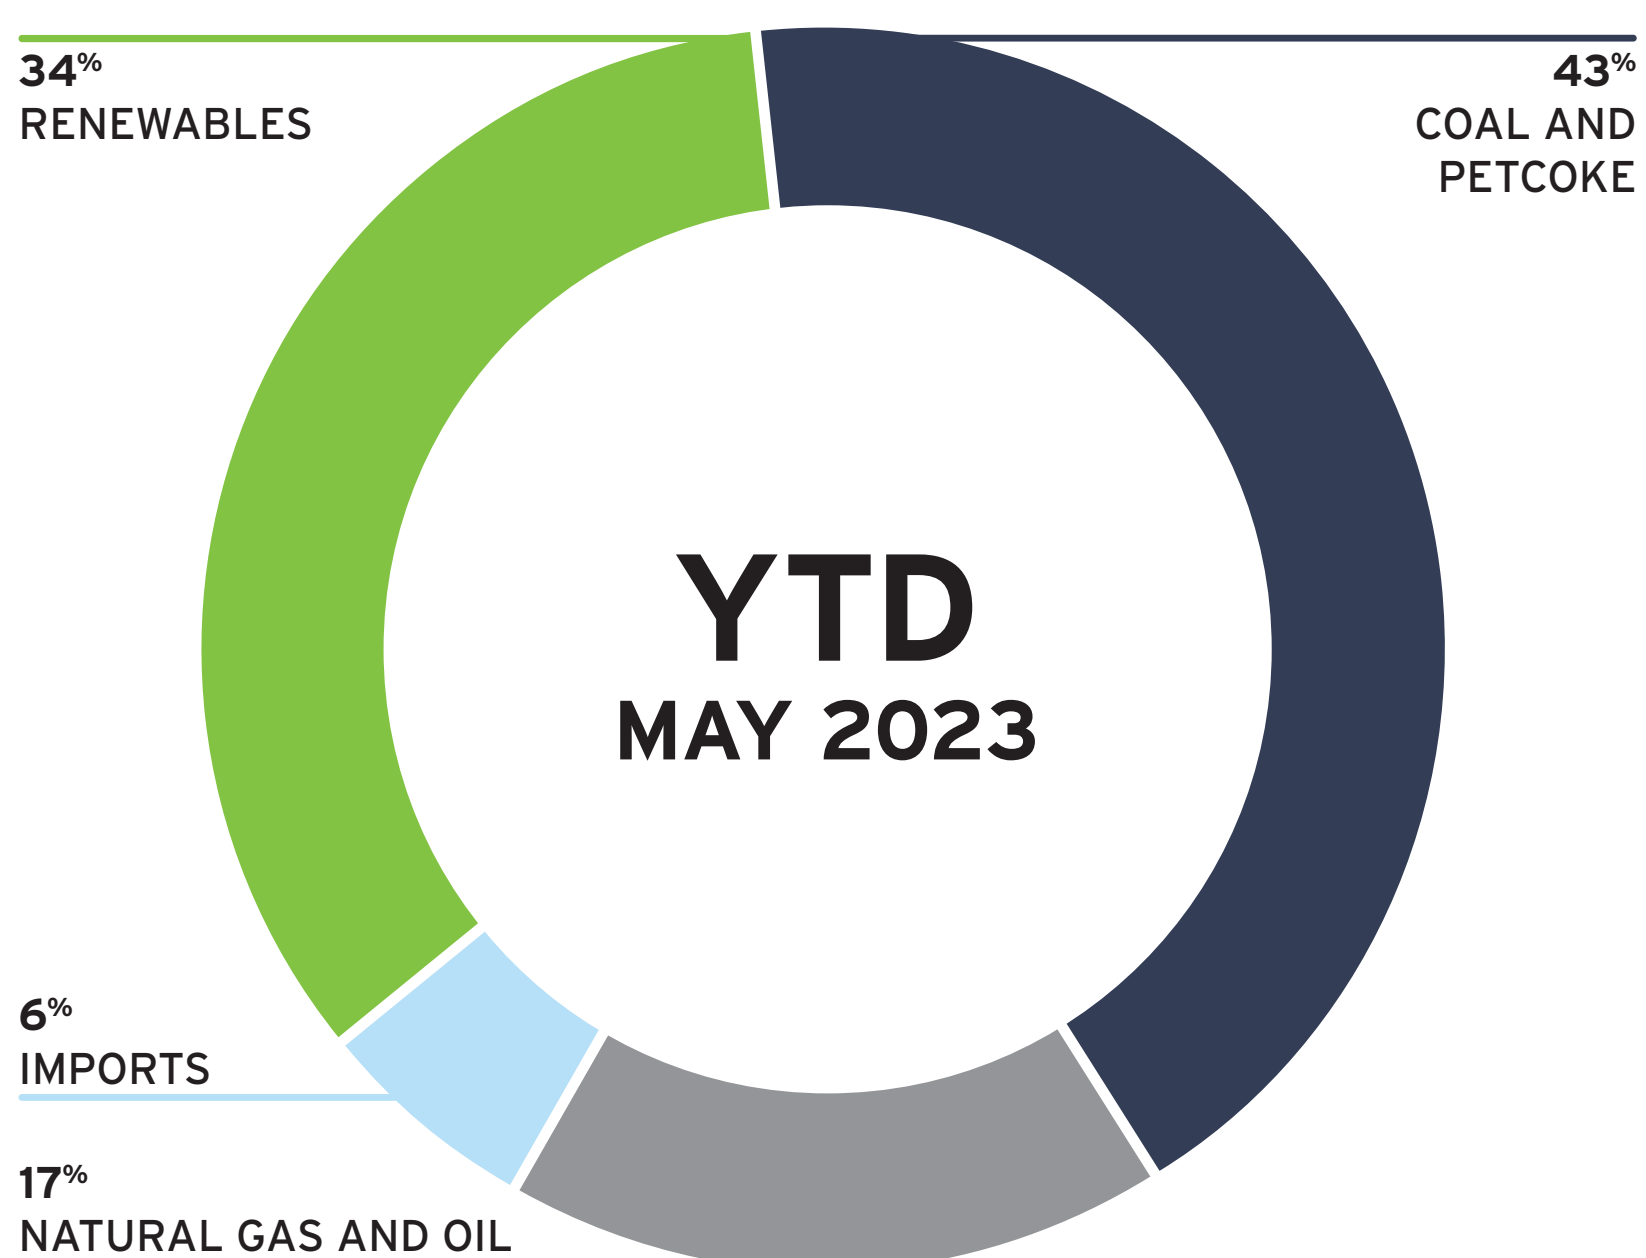

WHY ARE WE DOING THIS?

Federal and Provincial Governments are focused on reducing carbon emissions on an expedited basis to mitigate potential climate impacts; we fully support this goal.

This goal delivers on Nova Scotia's 2030 environmental policy targets and supports economic growth and development, including in the renewable energy industry.

We are committed to phasing out coal-fired electricity and delivering 80% renewable energy for customers by 2030, in alignment with both federal and provincial policy.

WHERE YOUR ENERGY COMES FROM NOW

WHERE WE'RE HEADED
