

1:10,000 Secondary and Shore Direct Watersheds of Nova Scotia

New Brunswick

P.E.I.

A note regarding Shore Direct watersheds
 Shore direct refers to small watersheds that are coastal in nature and are usually small. They do not extend into the hinterland of the province as other watersheds do. They can be found in the coastal areas of Nova Scotia and are not unique to any one specific area.

They do not have river names associated with them and are not labeled on the map or table.

The original coding and river allocations were calculated by the Maritime Resource Management Service for the Department of Environment in 1981.
